Subject Index

Acetylated cellulose, 523
Alcohols, oxidation of by oxygen in alkali, 73
Alkali lignin hydrolysis, 467
Ammonia, anhydrous, 199, 213, 231, 241, 251
  beech wood, behavior in, 199
  color change of wood in, 231
  cotton, behavior in, 199
  cotton, structural changes in, 213
  plasticizing wood by, 231, 251
  pulping hardwoods with, 241
  wood properties, changes by, 251
Amylose triacetate, monomolecular film properties, 267
1,6-Anhydro-B-D-glucopyranose, thermal behavior, 21
Annealing of cellulose, 343
Aqueous solutions, distribution in wood, 141
Bacterial cellulose, 417
Beech wood, effect of anhydrous ammonia on, 199
Carbohydrates, thermal behavior of, 21
Carboxymethylcellulose, 509
Cell wall, theories of molecular organization, 393
  ultrastructure, 383
Cellulase in glucose production, 445
Cellulose
  acetylated, 523
  bacterial, 417
  carboxymethylcellulose, 509
  cell wall theories, 393
  cellulase for conversion to glucose, 445
  chars, 3
  cotton, behavior in anhydrous ammonia, 199, 213
  crystalline substructure, 327
  electron micrographs, interpretation of, 409
  entropic deformation in fibrils, 363
  enzymatic degradation of derivatives, 509
  fibrils, 363
  film properties of the triacetate monolayer, 267
  folding chain model, 343
  free radical formation in, 53
  gel permeation chromatography, 87, 103
  gels for separation of oligosaccharides, 279
  hydroxyalkyl, 491
  iodide inhibition of depolymerization, 73
  light scattering measurements, 121
  mechanical behavior, 393
  microfibrils, 327, 407, 409
  molecular weight distribution, 87, 103
  monomolecular film properties of the triacetate, 267
  oxidation by oxygen in alkali, 73
  oxidative reactions in, 53
  precursor of in bacteria, 417
  prolate ellipsoid model, 293
  reactivity related to structure, 305
  sodium cellulose carboxylate, 529
  structure in relation to reactivity, 305
  substituent distribution, 523
  synthesis, 407
  thermal degradation of, 3
  triacetate monolayer film properties, 267
  triacetate viscosities, 293
  water absorptive capacity of sodium cellulose carboxylate, 529
Chars, 3
Chemi-mechanical pulping with ammonia vapor, 241
Chitin microfibrils, 327
Color control of wood during ammonia treatment, 231
Cotton, effect of anhydrous ammonia on, 199, 213
Cottonwood, thermal behavior of, 21
Degradation, enzymatic, 445, 509
  thermal, 3
2-Deoxy-α-D-*arabino*-hexopyranosides, thermal behavior, 21
Electron micrographs, interpretation of, 409
Entropic deformation mechanism, 363
Enzymatic degradation, 445, 509
Fibers, twisting energy of, 177
Film properties of monolayers, 267
Folding chain model of cellulose, 343
Free radical initiated reactions, 53

Gel permeation chromatography, 87, 103
Glucose, from cellulose by cellulase, 445
Hardwoods, ring shake formation, 153
Holocellulose fibers, 177
Hydrogenation of kraft lignin, 477
Hydrolysis of alkali lignin, 467
Hydroxyalkyl celluloses, 491
Iodide, inhibition of depolymerization by, 73
Kraft lignin hydrogenation, 477
Light scattering by cellulose, 121
Lignin, 321, 425, 467, 477
  fibrillar, 321
  fragments in pine prehydrolyzates, 425
  hydrogenation of kraft lignin, 477
  hydrolysis of alkali lignin, 467
Molecular weight, distribution, 87, 103
  effect of pulping process on, 87
  effect of treatments of rayon print cloth, 103
Mucilage, from slippery elm, 461
Oligosaccharides, separation of, 279
Oxidation, initiated by free radicals, 53
  oxygen in alkali, 73
Pectin, fibrillar, 321
Phenyl B-D-glucopyranosides, thermal behavior, 21
Phenyl B-D-xylopyranosides, thermal behavior, 21
Pine prehydrolyzates, 425
Plasticizing wood with ammonia, 231, 251
Polysaccharides in pine prehydrolyzates, 425
Precursor of cellulose, 417
Prolate ellipsoid model, 293
Pulping processes, effects on DP, 87
Pulping with ammonia vapor, 241
Rayon print cloth, 103
Reactivity related to cellulose structure, 305
Ring shake in hardwoods, 153
Slippery elm mucilage, 461
Sodium cellulose carboxylate, 529
Substituent distribution in acetylated cellulose, 523
Synthesis of cellulose microfibrils, 407
Thermal degradation, 3
Twisting energy of holocellulose fibers, 177
Viscosity of cellulose triacetate fractions, 293
Water absorptive capacity of sodium cellulose carboxylate, 529
Wood, distribution aqueous solutions in, 141
  properties affected by liquid ammonia, 251
Wood fibers, solid state light scattering, 121
α-D-Xylopyranose, thermal behavior, 21
